

How to save Katso one-time password file with Firefox (v.45.0)

If you have no printer available, this is how you can save the list of one-time Katso passwords onto your computer.

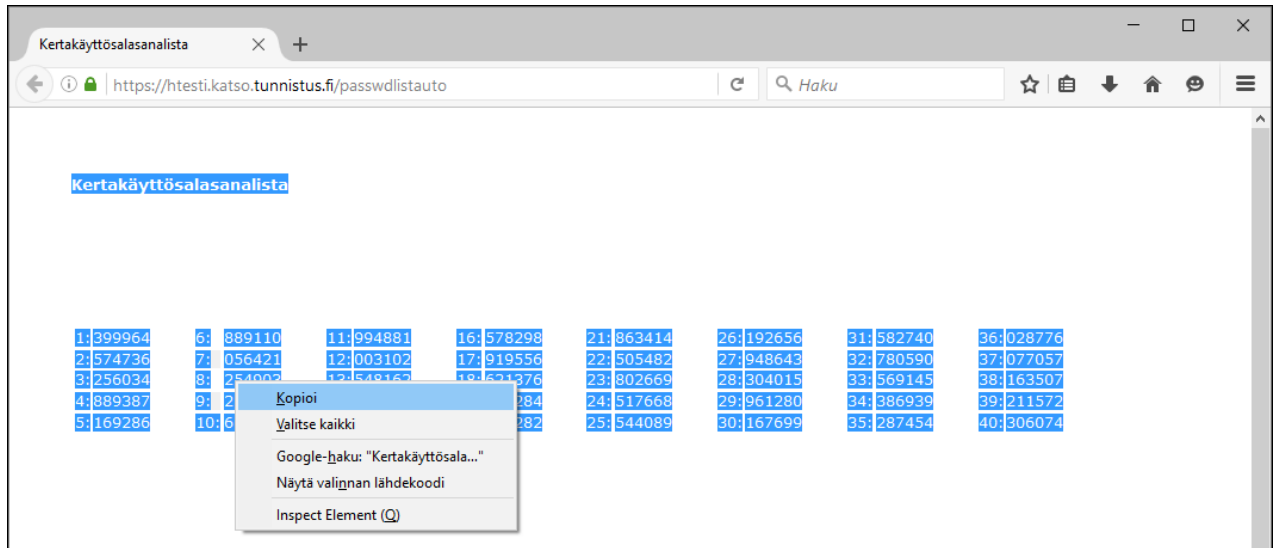

Another option is to print the list on a document printer in a file, such as a pdf or xps document.

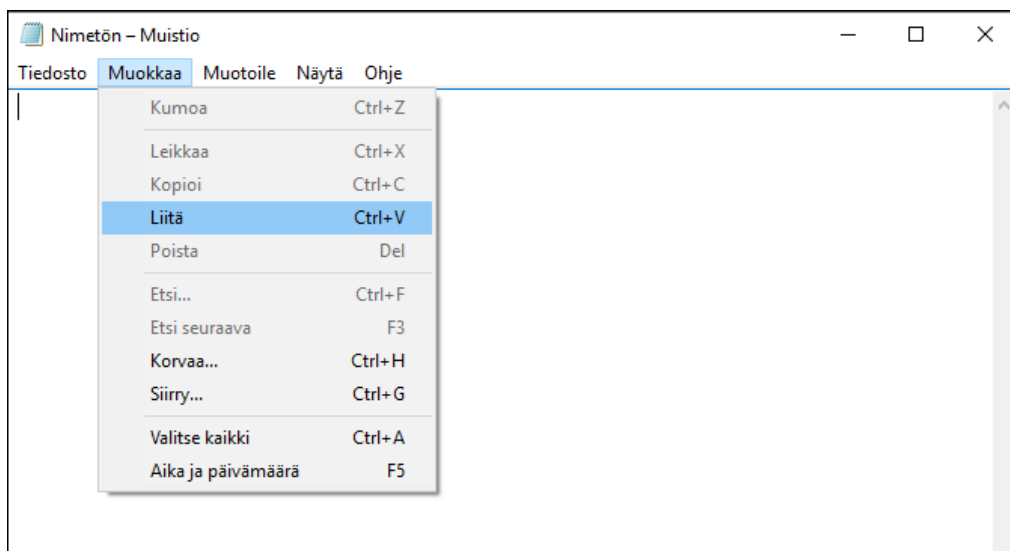

On the screen Identifier details, under List of one-time passwords, right-click over the link Print and select Open in new window.

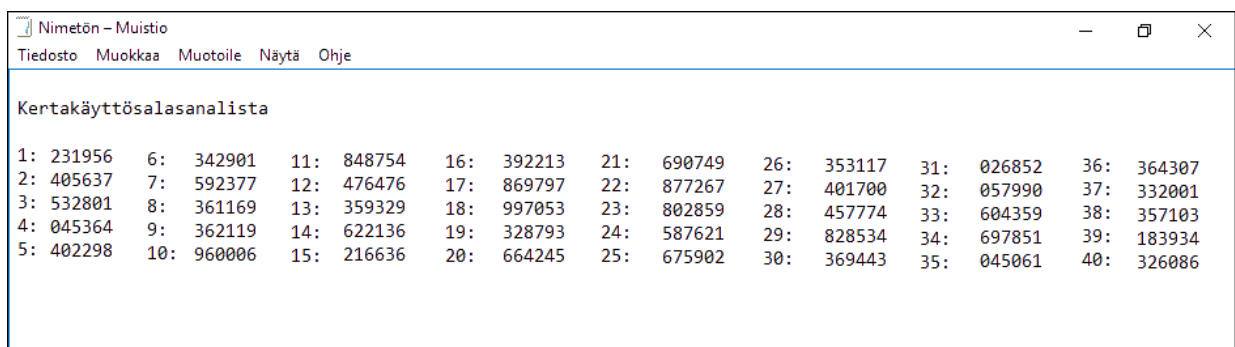

After that you see a list of passwords and a Print screen. In the Print screen, select Cancel.

Paint the list of one-time passwords, right-click your mouse over the painted area and select Copy (or click Ctrl+C).

Open Notepad or some other text processing program. In the Edit menu, select Paste (or Ctrl+v).

Save the file under a suitable name. Close the screen with the one-time passwords and return to the Identifier details screen. The new list of one-time passwords is now active. Log out from Katso.
