Version	Date	Description
1.00	23/03/2018	New document. Includes an example written in the .Net/C# language.
1.01	31/03/2021	Changed the publisher of the document into the Incomes Register Unit.

2   CONTENTS OF THE ZIP FILE

2.1   .NET/C# example

The package contains a client implementation of a call sent to the Echo service (EchoService) and the signing of the request message sent. The implementation is based on the Windows Communications Foundation (WCF) technology.

The example is not functional as such. The Incomes Register customer certificate data must be edited in the source code and the configuration file.
